-  **Process Steps:** Step-by-step instructions intended to complete a task associated with the enhancement or correction.
-  **Information:** General information needed to understand the context, behaviors, and restrictions associated with new enhancements and corrections.

v14.4.46.201562111 (06/16/2020)

Enhancements

The following items are newly-implemented features intended to increase end-user productivity throughout TrackIt.

DVIR Post-trip alert

(TX-2934)

A new [DVIR Post-Trip](#) alert has been added to the Web Console for VisTracks users. This alert will trigger when a driver attempts to enter the Clock Out status or Log Out of TrackIt Android without first completing a Post-trip DVIR. Administrators have the option to prevent drivers from clocking out until the Post-trip DVIR is complete.

DVIR Pre-trip alert

(TX-2902)

A new [DVIR Pre-Trip](#) alert was created for TrackIt and VisTracks users. If a driver starts their vehicle without completing a Pre-trip DVIR, this alert can be set to trigger.

VisTracks automatically creates Shipments for HOS

(DDT-2257)

Tickets received by TrackIt from a ticketing system will now automatically update VisTracks. This means that shipment information present on a ticket in TrackIt will create an Hours of Service Shipment in VisTracks. With this update, drivers can more easily stay compliant with the ELD mandate.
