These release notes contain information regarding new functionalities, behaviors, changes, and other new experiences you should expect when using this latest version of the TrackIt Android product.

Legend

Enhancement: A new feature created to expand the capabilities of the TrackIt Android app and increase its overall benefit for end users.

Correction: A change intended to remove unexpected behaviors in the TrackIt Android app and improve the overall end user experience.

Process Steps: Step-by-step instructions intended to complete a task associated with the enhancement or correction.

Information: General information needed to understand the context, behaviors, and restrictions associated with new enhancements and corrections.

v14.4.62 (2/2/2021)

Enhancements

The following items are newly-implemented features intended to increase end-user productivity throughout TrackIt.

TrackIt Android monitors Bluetooth Connectivity (FEL-2268)

A new Bluetooth Connectivity state was added to the DCM Health aspect. This state will allow customers to view when the Sensor Link loses Bluetooth connectivity with TrackIt. TrackIt Android was updated to include focused monitoring of bluetooth connectivity from the Sensor Link, so the bluetooth status can be relayed to the TrackIt Web Console.
