

TrackIt[®]

Android

Version: 14.4.66

Release Notes

4/6/2021

**Command
Alkon**

These release notes contain information regarding new functionalities, behaviors, changes, and other new experiences you should expect when using this latest version of the TrackIt Android product.

Legend

Enhancement: A new feature created to expand the capabilities of the TrackIt Android app and increase its overall benefit for end users.

Correction: A change intended to remove unexpected behaviors in the TrackIt Android app and improve the overall end user experience.

Process Steps: Step-by-step instructions intended to complete a task associated with the enhancement or correction.

Information: General information needed to understand the context, behaviors, and restrictions associated with new enhancements and corrections.

v14.4.66 (4/6/2021)

Corrections

The following tickets are improvements upon unexpected user experiences for a more fluid and productive experience throughout TrackIt Android.

DCM algorithms do not account for priming

(FEL-2853)

Corrected behavior:

Tablet-based algorithms for TrackIt Delivery Cycle Monitoring have been updated to include logic that accounts for priming. For example, in instances in which a truck is discharging and goes to a charging state before going back to discharging, the algorithm is now adjusted to allow the truck to go back to discharging before the drum volume will begin to read a reduction in material.

Previous behavior:

The Tablet-based algorithms for TrackIt Delivery Cycle Monitoring do not account for scenarios in which a truck is priming or when the truck goes from discharging to charging and then back to a discharging state.
