Correction: A change intended to remove unexpected behaviors in the TrackIt Android app and improve the overall end user experience.

Process Steps: Step-by-step instructions intended to complete a task associated with the enhancement or correction.

Information: General information needed to understand the context, behaviors, and restrictions associated with new enhancements and corrections.

v14.4.68 (05/04/2021)

Enhancements

The following items are newly-implemented features intended to increase end-user productivity throughout TrackIt.

Location permissions update for Android 11

(FEL-3004)

To accommodate changes to device location permissions with Android 11, TrackIt Android now provides a different location permissions process. Upon start up after TrackIt Android is installed or the device's operating system is updated, the app will present a permissions screen with the new process.

To enable location permissions for Android 11

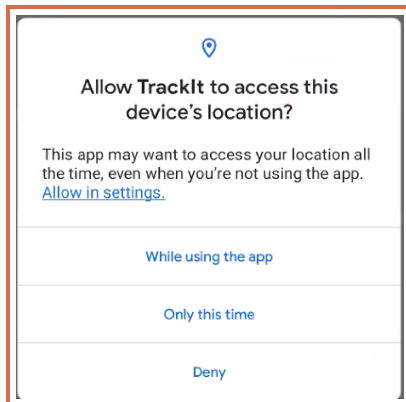

1. Tap the Enable button on the TrackIt Android Permissions screen.
2. In the explanation window, tap APPLY.

After you click "Apply", on the next pop up dialog box, click the hyperlink "Allow in settings" to bring you to the options screen. On the options screen, click "Allow all the time".

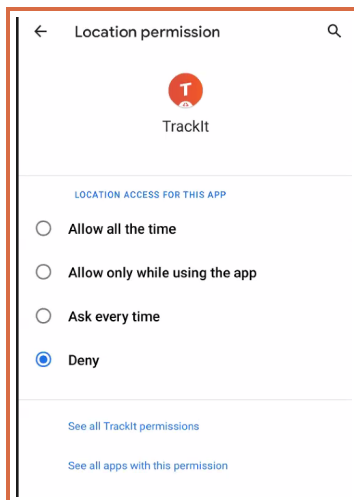

BACK

APPLY

3. A permissions window will appear, tap the link **Allow in settings**.

4. Tap **Allow all the time** in the Location permission screen in Settings.

5. Tap the Back arrow to return to the TrackIt Android Permissions screen.

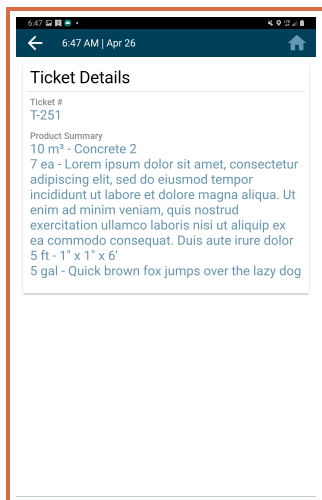

Product Summary field expanded

(FEL-4031)

The Product Summary field for tickets was expanded to allow the Ticket Card in TrackIt Android to display more information when a driver opens the card. Because this change includes updates to

the TrackIt Web Console that affect TrackIt Android, the changes will only appear on TrackIt Android if the TrackIt Web Console application is updated to version [3.0.63](#)+

Load Properties card displays Check RPM

(CA-630)

PREREQUISITE: This functionality requires Display firmware version 4.42.0.0+ and COMMANDassurance App version 5.6.0.0+.

For users of COMMANDassurance, a new notification will appear on the [Load Properties](#) card to help drivers obtain slump measurements. In the **Current** slump field, **Var RPMs** will appear if the truck's drum RPMs are fluctuating too much for the probe to obtain an accurate slump reading. Additionally, after reaching the Fully Mixed status, **No Slump** will display if a slump cannot be determined within four (4) revolutions at low RPMs.
