

TrackIt[®]

Web Console

Version: 3.0.56

Release Notes

1/19/2021

**Command
Alkon**

These release notes contain information regarding new functionalities, behaviors, changes, and other new experiences you should expect when using this latest version of the product.

Legend

Enhancement: A new feature created to expand the capabilities of the TrackIt Web Console and increase its overall benefit for end users.

Correction: A change intended to remove unexpected behaviors in the TrackIt Web Console and improve the overall end user experience.

Process Steps: Step-by-step instructions intended to complete a task associated with the enhancement or correction.

Information: General information needed to understand the context, behaviors, and restrictions associated with new enhancements and corrections.

v3.0.56 (1/19/2021)

New End Pour logic for COMMANDassurance

(CA-494)

The automated End Pour status trigger for COMMANDassurance will now account for more pouring scenarios. The logic accounts for leftover concrete and if the driver does not increase the drum speed to greater than 6 RPMs in the discharge direction at the end of pouring.

While in Pouring status, TrackIt will monitor and record when the drum rotates in a discharge direction. Once a qualifying event occurs, the last recorded discharge is taken as the actual End Pour time. A qualifying event occurs when the vehicle drives at more than 15 MPH or when the vehicle status changes to Washing or Returning.
